“For the Best in Glads”

DIRECTIONS FOR ORDERING

No single item for less than 10¢. Ten bulbs or bulblets at 8 times single price.

All retail orders amounting to \$2.00 or over will be sent prepaid to any point in U. S. On orders of less than \$2.00 please add 15c extra for postage and packing. Each order must be accompanied by remittance in full, or a 25% deposit, the balance C.O.D.

If you wish to order part from the retail list and part from the wholesale list, we will send the order transportation collect and will include extras or overcount to make up for the transportation on the retail items.

All orders received subject to prior sale. We recommend that you order early to avoid disappointment in case we run out of a variety.

We add extras to each order, the amount and varieties vary with the size of the order. It will help us if you will suggest varieties you would like to try.

WHOLESALE PRICES

We will sell 10 bulbs at 8 times the single price, 25 bulbs at 18 times the single price, and 100 bulbs at 64 times the single price. We will prepay all orders at wholesale prices except on the 100 rate. The 100 rate is priced F.O.B. Madison, Ohio. On large lots of bulbs or bulblets will be pleased to quote prices on want lists. In most cases we have ample stocks of the common commercial varieties to quote on 1000 lots.

BULB SIZES

We offer bulbs in three sizes: Large size is from 1¼ inches in diameter, medium size from ¾ to 1¼" in diameter, small size three-eighths to ¾ inches in diameter. For top performance the large size bulb is best. Medium size bulbs will give good blooms, but will be smaller and bloom a little later in the season. Small size bulbs will generally bloom, but spikes will be noticeably smaller. They will make large bulbs for next year.

BULBLETS

Bulblets are hard shelled cornels which are found at base of bulb when dug. They are recommended to experienced growers who want to get an inexpensive start of a variety, often they are difficult to germinate so we do not guarantee them to grow. Packages of bulblets will run from 50 upward.

(No bulblet orders accepted after April 1st.)

KEY TO DESCRIPTIONS

First is the name of the variety, then in parenthesis the size and color class figures (see Classification Key below).

Following this is the name of the originator and the year in which the variety was first available to American purchasers.

The figures in the last parenthesis denote the number of growing days required from planting to date of blooming for large bulbs.

Because of soil conditions, climate, etc. this will vary considerably. However, the blooming dates will give some idea of what to expect from a variety.

CLASSIFICATION KEY

The number after the name of the variety denotes the classification number as they are classified in our gladiolus shows at the present time. They are classified in five sizes as follows:

Miniature Glads	100	—Florets under 2½"
Small Glads	200	—2½" through 3¼"
Medium Glads	300	—3¼" through 4¾"
Large Glads	400	—4¾" through 5¾"
Giant Glads	500	—5½" or larger

For instance, Abigail is the first variety described, and whose number is 366. The 300 means it has a floret size from 3¼" through 4¾" and the 66 designates it a lavender. Hence the numbers right after the name tell the story of the size and color of the individual floret as grown under field conditions from large bulbs.

NEW INTRODUCTIONS FOR 1948

From Jerry J. Polinsky
SIBONEY (566) Allen '48 (90)

A clear medium lavender self blending a little deeper in the throat. Florets are heavily ruffled and closely attached. Will open 8--6" to 7" florets on a long flowerhead. Produces lots of bulblets that germinate and grow well. Medium height, but foliage grows low and broad permitting a low cut. Will open well when cut in tight bud. Wherever shown it has been the center of attraction on the show table. Color, floret size and shape, spike formation, and number open are outstanding.

PERSIAN BEAUTY (586) Knierim '48 (90)

We have purchased and are introducing this variety in conjunction with Snyder's "Glad Acres".

Color is Persian lilac blending out to rose taupe with a silvery gray edge on all petals. This is a sport of R. B. It retains all the size of florets, vigor, and habits of R. B., and is identical in fact except for color. All those who like R. B. we feel sure will want this variety.

Bulbs \$2.00 each any size; Bulblets 25c each.

Gladiolus Seeds

We offer a new thrill to our customers—that of growing glads from seed. New varieties with the exception of sports are developed and selected from bulbs grown from seed. Each seed (even from the same pod) will be a different new glad with characteristics of its own. The percentage of good ones will be small, but you will find many you will enjoy growing and the chance always exists that you may be lucky enough to find something outstanding.

To grow seeds into bulbs plant them a little less than an inch deep in a well prepared seed bed. Keep them well watered and in partial shade. Most seeds will develop into large enough bulbs to bloom the next year with good culture. Then you can select the ones you want to save and increase your stock by growing the bulblets attached to the bulb.

All seed crosses offered here were made by Rev. William J. Single. We know he has done a careful conscientious job of hybridizing. The first variety listed is the seed parent, the second the pollen parent.

Please order these seeds in units of 5 by number. They are priced at 5c each. Please give us your second choice as we expect many crosses will sell out early.
